

Replace the paragraph beginning at page 29, line 4, with the following rewritten paragraph:

C23
Thus, the present invention provides a bonding method insuring a remarkably improved adhesion of an addition type curable hydrocarbon polymer composition to various substrates.

IN THE CLAIMS:

Please **AMEND** the claims as follows:

13. (Twice Amended) A bonding method for bonding a cured product to a substrate which comprises coating a primer composition comprising a silane coupling agent on a substrate,

C24
applying a curable composition comprising a hydrocarbon polymer having at least one alkenyl group per molecule onto the primed substrate, and curing the curable composition to obtain the cured product bonded to the substrate.

14. (Amended) The bonding method according to claim 13 wherein the silane coupling agent has at least one functional group selected from the group consisting of epoxy, vinyl and (meth)acryloyl groups.

C25
18. (Twice Amended) The bonding method according to Claim 13 or 14 wherein said primer composition comprises a polyvalent alkoxy silane and/or a condensation product thereof.

19. (Twice Amended) The bonding method according to Claim 13 or 14
wherein said primer composition comprises an organoaluminum compound and/or an
organotitanium compound.

25

20. (Twice Amended) The bonding method according to Claim 13 or 14
wherein said primer composition comprises a hydrosilylation catalyst.

21. (Twice Amended) The bonding method according to Claim 13 or 14
wherein said primer composition comprises an organic solvent.
